## Dehaco hydraulic demolition and sorting grabs

Once a Dehaco hydraulic grab has its claws in something, it is not very likely to drop it again. The weight of the grabs is relatively low and the volume is large, and yet they are very powerful, reliable and user friendly. They are the result of the experience that Dehaco has gained in more than 30 years.

The perforations in the shells provide the operator with an optimum view on his work, enabling him to work with the required precision. The dust seal of the hinges provides a lasting, trouble-free operation.

With models for specific applications, in dozens of versions from small to large, there is always a grab that is suitable for the work that you must perform. The smallest model weighs 40 kg and has a 30 litre capacity. The largest grab is a 13,000 kg giant with a capacity of no less than 4,600 litres.

From the DSG603 up, all models are provided with two rotation motors, ensuring a much better distribution of forces on the slewing ring. The models upwards from DSG803 are made with two cylinders for an optimum power distribution, allowing the shells to close simultaneously.

This brochure provides an overview of the different models, the possible applications and technical specifications.

Rental is a good way to discover what Dehaco's grabs are capable of. A guide with rental equipment can be found on our website: [www.dehaco.nl](http://www.dehaco.nl)

Models with a slewing ring have an unprecedented manoeuvrability, due to a 360° hydraulic rotation.

Renovation and demolition applications

Sorting of scrap metal

Separation of various construction materials

Chapter	Page
Features of hydraulic demolition and sorting grabs	4-5
Demolition and sorting grabs with rotation	6-13
Demolition and sorting grabs without rotation	14-15
Adapters	16-17

## Features

### Hydraulic demolition and sorting grabs

#### 360° hydraulic rotation

High manoeuvrability due to 360° hydraulic rotation - DSG-R

#### Dual rotation motors

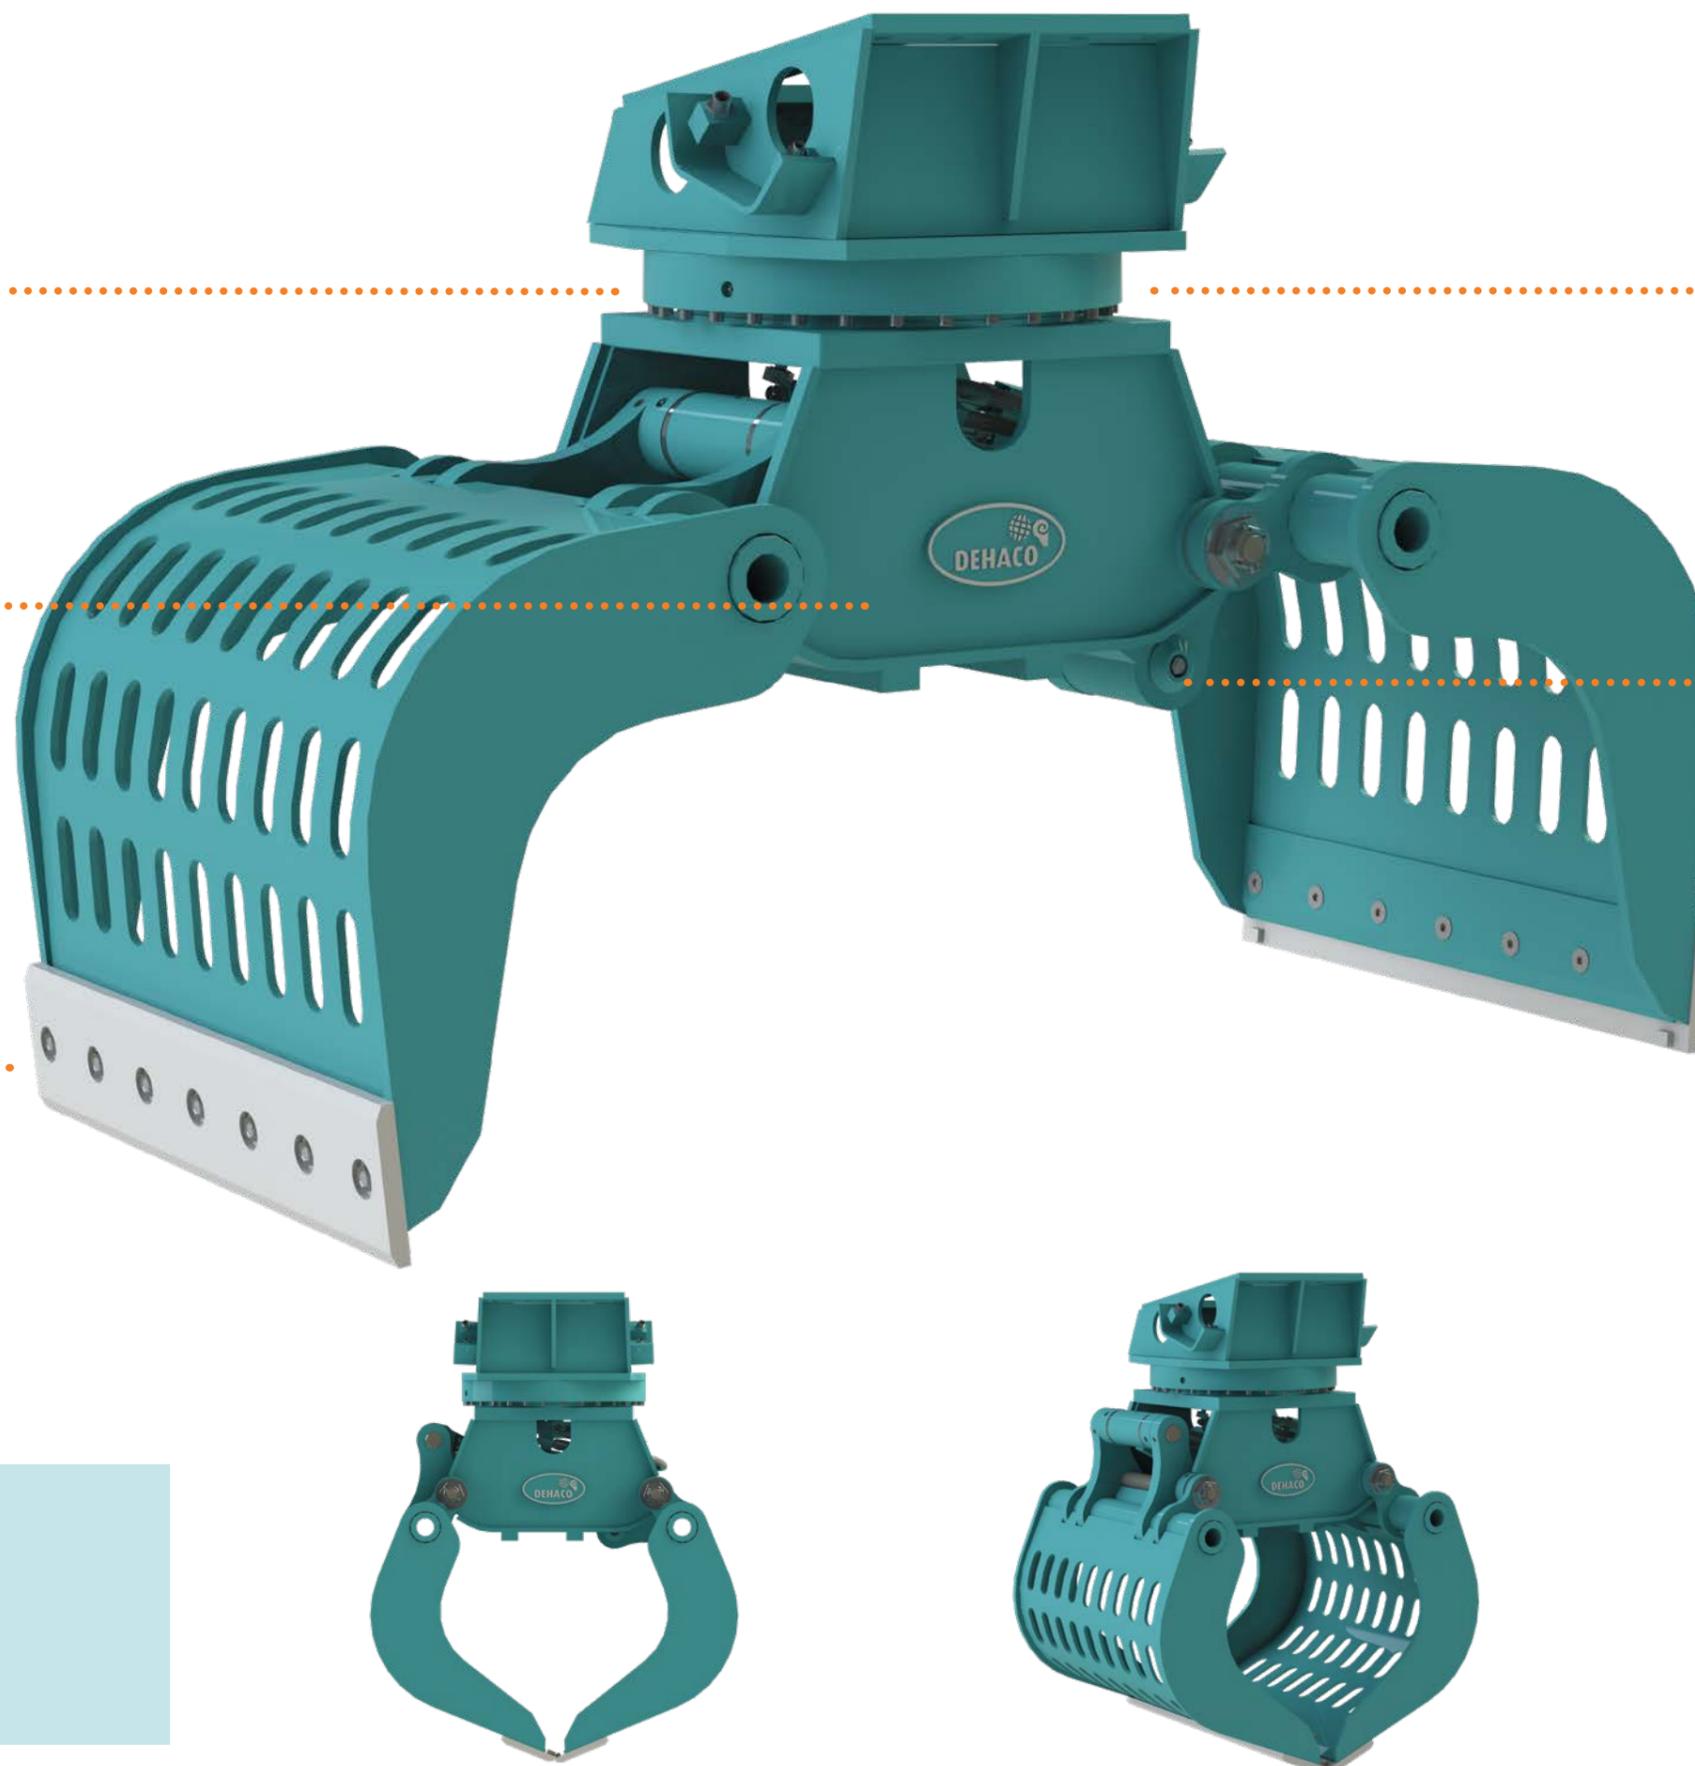

From the DSG603-R up, all models are equipped with dual rotation motors. A great benefit of this is that power distribution on the slewing ring is much better.

#### Cutting edges

From the DSG250-R and F series up, all models are equipped with interchangeable and reversible cutting edges with countersunk bolts. The blade bolts are countersunk to prevent material getting caught behind.

#### Optional

- Available with load holding valve
- Sprayed in the required colour
- Equipped with a closed shell instead of perforated shells

#### Slewing ring

All DSG-R demolition and sorting grabs are equipped with a substantial slewing ring. As a result, all models are ultimately suitable for the heaviest applications, even for demolition work.

#### Optimum power distribution due to double cylinder

From the DSG803 up, all models are equipped with two cylinders. Consequently the power distribution is much better on the shells, as a result of which they close simultaneously.

#### Minimum wear and tear

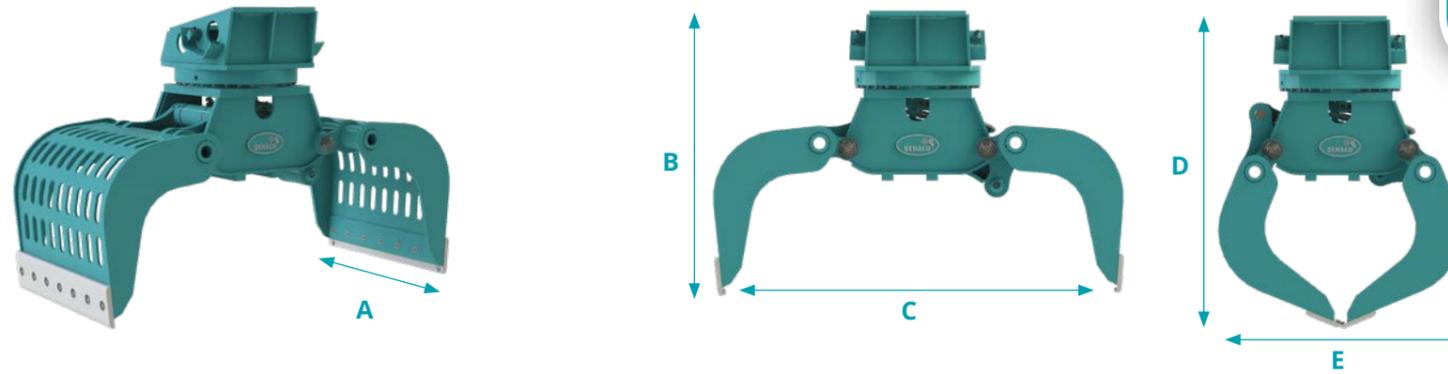

Due to the special cylinder design and the equaliser, movement is kept to a minimum, resulting in almost no wear to the internal hoses.

#### Cylinders with cushion dampening

DSG demolition and sorting grab cylinders are equipped with cushion dampening, resulting in the shells closing without creating shocks to the excavator or damage to the main frame of the grab.

## Adapters

Suspension systems are available for any type of excavator and weight class. In Dehaco's range you can find the following adapters:

- CW Verachttert adapter
- OilQuick adapter
- Lehnhoff MS adapter
- Engcon S adapter
- Hydrema adapter
- Terex Fuchs MHL adapter
- Hitachi ZX adapter
- Atlas TC adapter
- Liebherr LH adapter

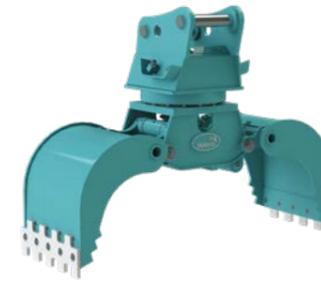

Is your adapter not listed?  
Ask us about the possibilities!

■ CW Verachttert universal suspension

■ Flat top bracket

■ Suspension with **fixed pins** for quick couplings hooked in-between. Example: Engcon S-, Hydrema, Lehnhoff.

■ Suspension with **loose pins** for suspension with direct connection. Example: Terex Fuchs, Hitachi, Liebherr.

■ OilQuick

■ Lehnhoff
